

Your client's organization runs on mobility.
Mobility runs on batteries.

TEST & REPLACE™

Small batteries can cause BIG problems...

*Are you able to quickly identify a bad battery from a good battery?
You can't, and neither can your clients, which means bad batteries
continue to circulate throughout their operations.*

It's Time to Offer Your Clients a New Managed Service

GTS' new **Test & Replace™** technology is a great way to differentiate your offerings, provide a unique, new value-add service, and increase your involvement in your client's mobile operations.

Test & Replace™ allows your clients to easily identify and remove bad batteries. With this technology they'll quickly begin lowering their battery costs and decreasing their service agreement costs, all while increasing their productivity.

Using GTS' innovative Tester and Mobile App will allow your clients to efficiently diagnose, remove, and replace their bad batteries right on-site.

Only GTS offers this patent-pending, mobile battery testing technology. Join us in revolutionizing the way organizations approach mobile power management. To learn more, please visit our website:
